HTML
CSS Sass SCSS
Tailwindcss
Vue.js
ResfulAPI
MySQL

## EXPERIENCE

### FRONTEND DEVELOPER
SCALEUP | 04.2023 - Present

ScaleUP is a product that aids shops in realizing the Omnichannel strategy. The ScaleUP Platform is a platform that consolidates all orders from all sales channels while optimizing operations to boost revenue and profits.

**Main Responsibilities:**
• Build this project from **zero**.
• Create **web dashboards** using **VueJS** so that users can track information about orders, customers, promotions, and inventory simply and intuitively.
• UI/UX design is delicate, clean, uncomplicated, and practical, which makes it **easy to understand and use**.

**Key results:**
• Assist partner employees in **reducing daily order processing time** by **30%**
• **Reduce** the rate of **cancellation, return, and product exchange** by more than **20%** by an online or offline inventory management system that computes inventory automatically to free up staff time for other activities.
• UI/UX design is delicate, clean, uncomplicated, and practical, which makes it **easy to understand and use**.
• **Reduce the manual work time** of managers and employees by about **30%**, while providing a good customer experience.

**Tech Stack:**
- TypeScript, VueJS, pinia, Tailwindcss, ElementUI

## Personal project

### FIGFLIX: MOVIE STREAMING WEBSITE
https://github.com/hieumt211299/figflix

**Description:**
- Developed a personal project where I designed and built a responsive movie streaming website, drawing inspiration from a Figma template.
- Implemented a user-friendly search function, enabling users to easily find movies within the website's library.
- Created a movie detail page, allowing users to click on a movie to view comprehensive information, including cast, plot, ratings, and more.
- Designed a slider feature for users to save and access their favorite movies, enhancing the overall user experience.

# EDUCATION

**TECHNICAL SKILLS USED:**
- HTML, CSS , SCSS, JavaScript, TypeScript, Vue.js, Restful API.

---

**To-Do List Application**

https://github.com/hieumt211299/ToDoList

**Description:**
- Developed a personal project, a web-based To-Do List application, featuring an array of robust functionalities to streamline task management and boost productivity.
- Successfully implemented essential features, including task addition, deletion, and updating.
- Incorporated task status tracking, enabling users to mark tasks as complete or pending.
- Implemented sorting options for tasks, allowing users to organize their lists by ID or name.
- Integrated a powerful search feature for users to quickly find specific tasks based on keywords.
- Developed the capability to delete multiple tasks at once for efficient list management.
- Utilized pagination for improved user experience, ensuring smooth navigation through extensive task lists.
- This project demonstrates comprehensive problem-solving and web development skills, delivering a versatile and user-friendly To-Do List application.

**Technical Skills Used:**
- HTML, CSS,SCSS, JavaScript, TypeScript, Vue.js.
